The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the triangular configuration of three side walls as stated in claim 5, the different colored sections as stated in claim 7, the drawing that extends over a plurality of sections as stated in claim 8 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claims 5, 7 and 8 are objected to because their various elements are not shown in the drawings as discussed above. No new matter should be entered.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 9 and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Levesque.

Levesque discloses an upright multi-sectioned container in Fig. 4 with a screw thread connecting means.

Claims 1, 3, 4, 9 and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Neely.

Neely discloses a multi-sectioned container with a snapping mechanism connecting means with a seal 92.

Art Unit: 3727

Claims 1, 3, 4, 8, 9 and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Bidwell.

Bidwell discloses a multi-sectioned container with a drawing that extends over a plurality of sections (see Fig. 6).

Claims 1, 3, 4, 6, 9 and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Meyers.

Meyers discloses a multi-sectioned container wherein the horizontal cross section of the sections is square in shape.

Claims 1, 3, 4, 6, 7, 9 and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Kwon et al. (Kwon).

Kwon discloses a multi-sectioned container wherein the sections are of different color.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Neely, Meyers or Kwon.

Neely, Meyers and Kwon disclose square shaped sections. Triangular shaped cross sections are well known. It would have been obvious to modify the number of sides from four to three and to provide triangular shaped sections as a matter of design choice and personal preference as there is little criticality of the number of sides of the section as the present invention contemplates various number of sides and different polygons.

Art Unit: 3727

Claims 3 and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Neely, Meyers or Kwon.

This rejection is made in the event that these references do not show the water proof seal or the snap mechanism in the connecting means.

Snapping mechanisms are well known for locking sections of a multi-part container together. Water tight seals are well known for multi-sectioned containers. It would have been obvious to modify all the joints that connect sections and lids to have snapping mechanisms and water tight seals, to provide positive confirmation the sections and lids are locked together and to prevent the egress or ingress of fluid through the joints of the section to section joints or section to lid joints, respectively.
